WHY ONSHORE?

- ▶ Flexible resource model - scale up and down based on business need
- ▶ Increase talent reach 2x to 3x by tapping into other markets across the U.S.
 - Scale technology delivery capabilities by role, as a project team or fully outsource as a managed service
- ▶ Optimize cost of labor and delivery - savings 10-17%
 - Work performed in same time zone
 - Improve productivity
 - Minimize rework
 - Better communication and collaboration
- ▶ Enhance delivery coverage to follow the sun
 - Seamless transition of work from team to team
- ▶ Absorb real estate and infrastructure costs as well as provide delivery oversight

INCREASE TALENT REACH

Talent Availability Snapshot by Role by Market

"Genesis10 is among the few onshore pure-play service providers that are leveraging their delivery footprint to provide them with combined benefits of scale, skill-sets, cost, and client proximity. Their onshore model has a combined footprint of lower cost and metro locations, designed to support quicker ramp-ups and access specialized capabilities to meet client needs."

- Eric Simonson, Managing Partner, Research Everest Group

FOCUS AREAS

- Oracle Fusion Middleware Development
- Automated Software Testing
- Microservices
- Mobile & Digital Development
- QA Engineering & Automation
- Multi-Shift Support
- Sustainment - Non Production & Production
- Legacy Application Support

Managed Services

- Data Ingestion Factory
- Reporting Factory
- Resource Management Office (RMO)
- Program Management Office (PMO)
- Vulnerabilities Management
- Instructional Design

CASE STUDY

A major U.S. airline partner teamed with Genesis10 to enable Agile application development and maintenance for a key application.

To maximize customer value delivery through better goal alignment, our client transitioned software development methodologies from Waterfall to Agile and needed a partner to provide strong Agile project delivery capabilities and transformation support. Genesis10 was engaged to assist in the transformation and maturity of their Agile capabilities, using SCRUM.

A global fortune 125 manufacturing firm established an onshore innovation lab and Internet of Things (IoT) capability with Genesis10.

The Delivery Center team is leveraging Scrum, DevOps, full .Net stack and cloud-based solutions (Azure, AWS). The goal is to drive company growth initiatives, innovate and deliver prototypes. Client Feedback: The productivity and delivery pace is far faster than imagined which is attributed to removing corporate distractions and leveraging an onshore model.
